

Variety Selection

Key Points:

- ▶ Varieties with good bolting resistance and establishment should be drilled first.
- ▶ All varieties are partially resistant to rhizomania.
- ▶ Where BCN is a known problem, the use of tolerant varieties is recommended as part of an integrated approach.

BBRO in partnership with the British Society of Plant Breeders (BSPB) will deliver this years' variety testing programme to ensure UK growers gain access to the best genetics available for the UK market.

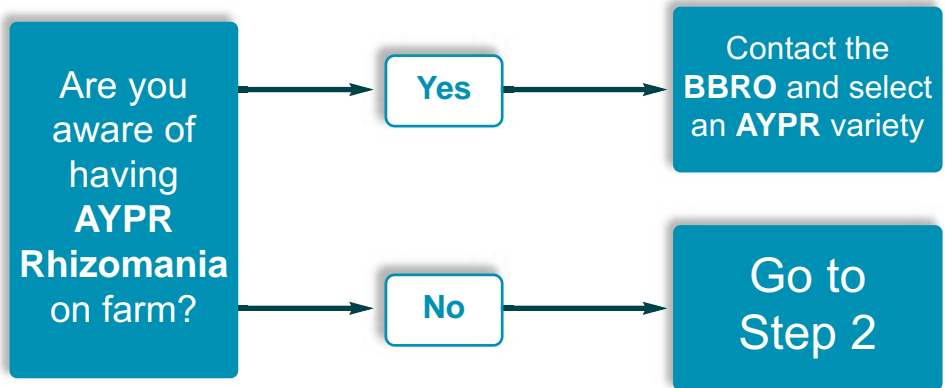

- 13 sites situated across the growing region.
- 120 different varieties under evaluation.
- 6000 plots.

The BBRO variety list for 2018 will be finalised and sent to growers in time for seed ordering for the 2018 crop.
